

## 2"-3" Spin Klin™

Automatic disc filtration system  
for low to medium flow rates in  
a compact footprint

inlet/outlet connection	flow rates	filtration degrees	max. working pressure
<b>2" SK: 80 - 150 mm (3" - 6")</b>	<b>10-120 m³/h (44-530 gpm)</b>		
<b>3" SK: 150 - 200 mm (6" - 8")</b>	<b>90-200 m³/h (400-880 gpm) and higher</b>	<b>20-400 micron</b>	<b>10 bar (145 psi)</b>

### features:

- Micron-precise depth filtration of solids
- Innovative disc technology captures and retains large amounts of solids
- Long-term operation with minimal maintenance
- Easy and simple operation
- Short automatic backwash with regulated water volume for a small water footprint
- Permanently eliminates the need to replace filter media
- Compact design

# How the 2"- 3" Spin Klin™ Systems Filters Work

## General

The Arkal 2"- 3" SpinKlin™ series are modular, all polymeric, automatic disc filters with a patented self-cleaning backwash mechanism.

The 2"- 3" SpinKlin™ systems range in flow rates from 10 m<sup>3</sup>/h (44 gpm) to 200 m<sup>3</sup>/h (880 gpm) with filtration degrees ranging from 20 - 400 micron. Inlet/Outlet from 80 - 200 mm (3"- 8") diameter.

## The Filtration Process

The discs are stacked on the SpinKlin™ spine and assembled according to pre-determined water filtration requirements. During filtration, the discs are compressed by means of a pre-loaded spring and differential pressure, forcing the water to pass through the grooved disc surface, thus trapping the solids.

## The Backwash Process

Activated by a pre-determined time command or differential pressure, the system enters backwash mode. The inlet valve port shuts as the drain valve port opens. During the backwash process, pressure is released and the spine's piston elevates, releasing the compression on the discs. Tangential jets of filtered water are then forced through the nozzles positioned along the spine. At this stage the discs spin freely, loosening the trapped solids which are then flushed out. During the flushing cycle each filter pod is backwashed sequentially, while the other pods continue to supply filtered water downstream. When a pod begins the backwash cycle, the system valves automatically reverse the flow in the pod, allowing filtered downstream pressurized water to backwash the filter.

## External Source Backwash

Each filter is backwashed sequentially, while the other filters continue to supply filtered water downstream. In each backwashed filter the inlet & outlet valves automatically close and the drain & external source valves automatically open. Pressurized filtered water from the external source header enters the backwashed filter through its outlet port and backwashes it.

- Higher energy for low operating pressure applications and fine filtration degrees

## Air Aided Backwash (for 2" Spin Klin™ systems only)

Main benefits:

- Enhanced cleaning power, especially on fine filtration degrees
- Minimized backwash water volume
- Low pressure operation
- Reduced backwash time per filter pod (<10 sec)
- The air and water mix at a minimum pressure of 2.5 bar generates the optimal cleaning performance in SpinKlin™ technology.

During the flushing cycle, each filter pod is backwashed sequentially while the other pod continues to supply filtered water downstream. When a pod begins the backwash cycle, the valves automatically reverse the flow in the pod, and open the air valve, allowing compressed air to push the filtered water stored in the accumulator through the backwash manifold and into the SpinKlin™ filter being backwashed.

Each backwash cycle requires a time delay to allow the water tank to be filled with clean water and air, making the total backwash duration longer than in regular systems.

A clean & dry air pressure source is necessary to operate the filtration system (supplied by the customer).

Construction materials	
Filter Housing & Lid	RPP (Reinforce Polypropylene) & RPA (Reinforce Polyamide)
Disc elements	PA (Polyamide) or PP (Polypropylene)
Backwash valves	RPP (Reinforce Polypropylene) or RPA (Reinforce Polyamide)
Manifolds	PP (Polypropylene)
Seals	NBR or EPDM, (Viton optional)
Control Tubing	PE or PA

## Disc material type availability according to filtration degree:

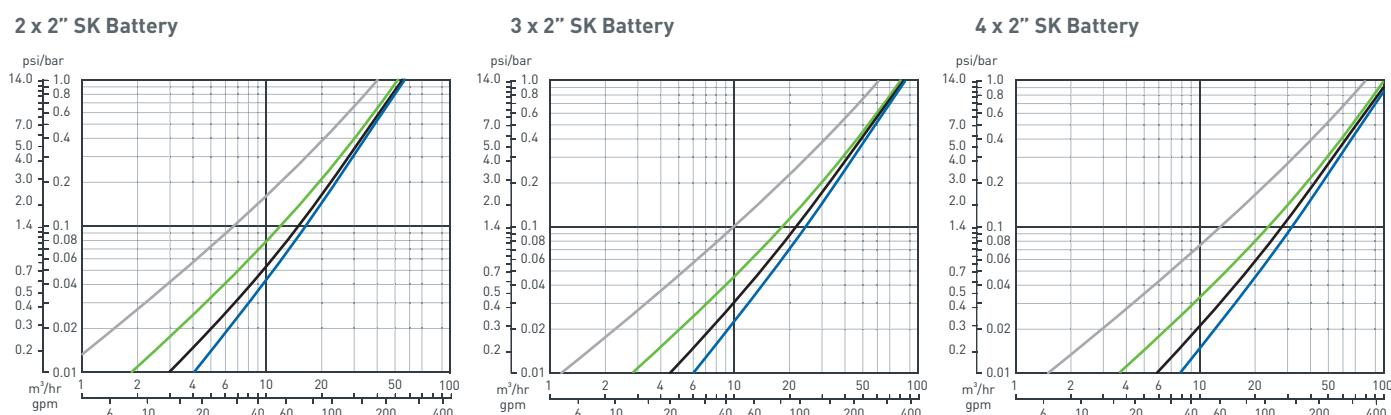

Color Code	Gray	Purple	Green	Brown	Black	Red	Yellow	Blue
Micron	20	40	55	70	100	130	200	400
PP Disc PA (Nylon) Disc	PP, PA	PP	PP, PA	PP
